$ cat resume.md senior software engineer

Senior software engineer with 10+ years of experience, specializing in developer tooling, platform infrastructure, and CI/CD systems at startups. Built an entire internal developer platform from scratch — local Kubernetes development CLI, shared package infrastructure, and CI/CD pipelines consumed org-wide — while simultaneously shipping product.

> Kubernetes · Helm · Docker · GCP · Go · Python · TypeScript · FastAPI · GitHub Actions · AWS · MongoDB · Terraform · OpenAI *...and whatever the problem needs*

> Experience

Swantide — Senior Software Engineer

Feb 2023 – Present

Founding engineer at a Salesforce automation startup. Hired with a frontend focus and grew into full ownership of backend services, infrastructure, and platform.

- **Platform & Infrastructure:** Built the internal developer toolchain from scratch — a Go CLI (`sd`) for local Kubernetes development via Helm, a reusable GitHub Actions CI/CD library consumed across all 8 repos, and a shared Python package (`swantide-commons`, 48 releases) used by every backend service. Cut Docker build times from 17 min to 2 min across 6 services.
- **Product & Architecture:** Designed and shipped an RBAC system end-to-end (RFC → Permit.io Kubernetes sidecar → Express middleware → CASL frontend). Built an AI documentation pipeline processing 600k+ Salesforce items via OpenAI Batch API. Architected the multi-org/workspace platform.
- **Frontend Modernization:** Migrated the frontend incrementally in production — CRA→Vite, Redux→TanStack Query, MUI v4→v5 — with no feature freeze and no incidents.
- **Engineering Process:** Introduced SCRUM ceremonies, owned sprint planning and backlog grooming, authored 11 architecture RFCs that drove team implementation.

Revel — Senior Software Engineer

Nov 2019 – Oct 2022

Led frontend and API gateway (Apollo/GraphQL) development at an electric moped ride-share and EV taxi startup (20 engineers). Shipped 7 greenfield products from idea to production.

- Migrated frontend to a monorepo (Yarn Workspaces, Turborepo) with shared component library, style library, and CI/CD tooling. Integrated GraphQL → TypeScript code-generation into FE and API codebases.
- Designed and built a consumer webview system that let web engineers ship native-feeling mobile features — unblocking a mobile-first company that had only 2 native engineers. Custom NativeToWebAPI for cross-platform communication; migrated CRA → Next.js SSR for performance parity.
- Built in-house driver scheduling system replacing fragmented third-party tools (Dayforce), from ambiguous requirements through MVP with direct user feedback.
- Led the Frontend Architecture Sync — a recurring open forum for architectural decisions and cross-team knowledge sharing.

Group Nine Media — Software Engineer

Sept 2017 – Nov 2019

- Built and maintained 4 products from AWS/Firestore data pipelines (internal tooling) to high-traffic consumer-facing sites

- Led the adoption of React and Redux across the frontend org (previously CakePHP) — pair programming, tech talks, and documentation to upskill the team

Complex Media — Front-End Developer # Oct 2016 – Sept 2017

React/Redux components across 6 high-traffic consumer sites; debugged and improved custom SSR framework

Freelance — Web Developer # Oct 2013 – 2016

Built websites for corporations, non-profits, and artists

Temple University Data Structures, Low Level Programming (C), Calculus, C++, Program Design & Abstraction, Java
